

Thomson Datafeeds

For use with ValueLink's data validation processes

Key Benefits:

- Breadth and depth of asset class and exchange coverage
- Access the full range of Thomson's global price, corporate actions and reference data at times to suit you, 24 hours a day
- Keep tight control on your costs by downloading only the data required
- Extremely easy and efficient to use, with pre-programmed permissioning and requests
- The perfect solution for regular, accurate downloads of intraday and closing data
- Fully integrated into ValueLink's robust data validation processes, eliminating the need for clients to commit expensive internal resources to data sourcing and checking

Thomson Financial provides fast and easy access to global intraday snapshot and end-of-day pricing, corporate actions and reference data on multiple asset classes, from over 130 exchanges and specialist third-party providers. The full breadth and depth of this content can now be accessed and used in conjunction with ValueLink's state-of-the-art data validation processes.

Access to the broadest range of data

Investment professionals need timely access to a wide range of prices for securities and portfolios at exactly the same time, regardless of portfolio size. To meet client needs, Thomson Financial provides intraday, market close and official closing prices for Equities, Benchmark Bonds, Derivatives, ForEx and Money Markets – captured simultaneously for anything from a small series of specific securities right through to multiple portfolios and even entire exchanges.

Access to high-quality corporate actions and reference data is also becoming increasingly important. Thomson Financial's datafeed solutions, used in conjunction with ValueLink's data validation services, draw on Thomson Financial's 30 years experience in providing comprehensive back-office data to integrate Datastream corporate actions and reference data with Thomson Financial's global pricing data.

Seamless integration with ValueLink's data validation services

ValueLink's clients can comingle Thomson Financial content alongside their own proprietary content and that of other third-party sources of data, which are quickly and simply integrated in ValueLink's validation processes by professional implementation staff.

Control your data and your costs

Pay only for the data you use. Clients have complete control over the data they receive, by specifying their precise data requirements and the timeslots at which it is required. Exchange permissions are activated by Thomson logon ID, removing the need for clients to control permissions themselves.

Key Features:

- Multi asset class coverage including Equities, Benchmark Bonds, Derivatives, Foreign Exchange and Money Markets
- Global exchange coverage – over 130 exchanges and third-party providers
- Multiple other sources of timely pricing, reference data, capital and income corporate actions and dividend and income payments
- Low cost of ownership – Thomson Financial provides its datafeed as a hosted solution with no infrastructure on the client site
- Customisable – the data you want, the way you want it
- Industry standards – industry standard codes including ISIN, SEDOL and CUSIP are available, as well as Thomson Financial symbologies
- Fully resilient service with hot backup and disaster recovery capabilities, guaranteeing data delivery
- Serviced by dedicated and experienced implementation and support staff
- Fully integrated into ValueLink's data validation processes

Interested?

To start the process of signing up for Thomson Datafeeds for use in conjunction with ValueLink's data validation processes, just **follow these steps**:

- Contact your local Thomson Financial representative or e-mail datafeeds@thomson.com
- Provide a list of the exchanges for which you would like to receive data and the asset classes you need to cover

From there, Thomson Financial, working closely with ValueLink, will assist you with the rest of the process.
